

LOUISE DERIZHY

Software Engineer | Full Stack Developer

+62 823-6731-9569 | louise.derizhy@gmail.com | linkedin.com/in/louisederizhy | derizhy.com/portfolio

Summary

Software Engineer with 4 years of experience developing and maintaining enterprise healthcare applications. Experienced in full-stack development, backend services, database design, and microservices, with a strong focus on system performance, problem solving, and technical improvement.

Technical Skills

Languages : TypeScript · JavaScript · Java · SQL
Frameworks & Libraries : Svelte · Spring Boot · Puppeteer · GrapesJS
Databases : PostgreSQL · Oracle · Redis · MongoDB

Experience

Software Developer | PT Murni Sadar Tbk | Oct 2022 – Present

- Develop and maintain full-stack healthcare applications supporting hospital information systems and operational workflows.
- Contributed to the migration of the HIS from a monolithic architecture to a microservices-based architecture, improving service maintainability, scalability, and deployment independence.
- Design database schemas, develop backend APIs, and manage data integration across multiple databases.
- Optimize SQL queries and data retrieval processes, achieving over 50% improvement in application performance.
- Conduct R&D, troubleshoot complex technical issues, and implement solutions to improve system reliability, performance, and operational efficiency.

Projects

HIS Services – Hospital Information System Backend

Java · Spring Boot · SQL · PostgreSQL · Microservices

- Developed and maintained backend services supporting hospital operations and business workflows.
- Implemented service separation and integration across the microservices architecture.
- Optimized database queries and resolved service-level issues to improve system performance and reliability.

MTHIS 2.0 – Murni Teguh Hospital Information System

Svelte · TypeScript · Java · Redis · SQL

- Developed and maintained full-stack features for a hospital information system used in daily operations.
- Developed reusable frontend components and integrated them with backend REST APIs.
- Implemented authentication, authorization, and database-related improvements across application workflows.

Assessment Builder – Electronic Medical Record Builder

Svelte · GrapesJS · MongoDB

- Developed a visual assessment builder using Svelte and GrapesJS for creating configurable electronic medical record forms.
- Designed MongoDB data structures to store dynamic assessment definitions and associated medical record data.
- Reduced dependency on hard-coded form structures by enabling configurable assessment templates and dynamic form rendering.

Browser Automation – Background Task Automation

TypeScript · Puppeteer · Bun

- Developed a headless browser automation service to execute repetitive browser-based tasks without manual user interaction.
- Automated workflows including screenshot generation, medical record PDF generation, and file uploads to backend services.
- Implemented background job execution to reduce repetitive manual operations and improve workflow efficiency.

Education

- Master of Information Technology | Universitas Mikroskil | Sep 2025 – Present
- Bachelor of Computer Science | Universitas Mikroskil | Oct 2020 – Oct 2024
